

## Automatically Disinfecting Patient Bathrooms

### ASEPT.1X

#### 24/7 Automated Protection Unit Against Pathogens

The ASEPT.1X unit pushes the limits of surface disinfection by automatically disinfecting patient bathrooms, which are a well-known reservoir of nosocomial diseases in hospitals.

Completely automated, the ASEPT.1X unit includes the following safety features: door contact and redundant infrared motion detectors. This allows the unit to only operate when no one is in the patient bathroom, for 5-minute disinfection cycles after each use.

ASEPT.1X disinfects 99.99% of contaminants such as VRE, C.difficile, and MRSA by sterilizing the most commonly touched areas.

#### BENEFITS

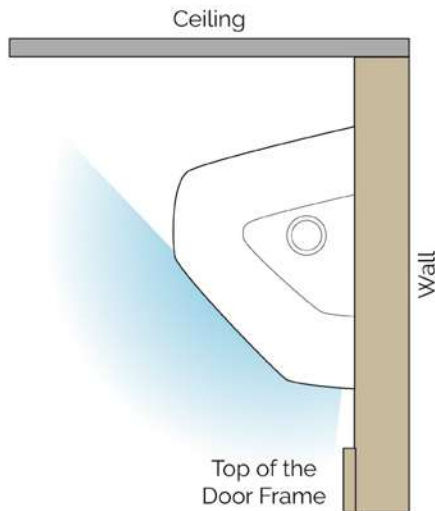

- Fully automated disinfection for patient bathrooms
- 5-minute disinfection cycle after each patient bathroom use
- Destroys pathogens responsible for nosocomial diseases
- Eliminates 99.99% of nosocomial pathogens

#### FEATURES

- Fan for air disinfection
- Wall-mounted
- Movement detection system
- Safety door switch
- Unit dimensions : 33" x 8" x 5.5"

#### WARRANTY

- Lamp: 1 year
- Ballast: 3 years

Lamps length :  
30"

Installation :  
Stand-alone  
(on a wall)

Eliminates germs
